Jajula Shivadhanu Goud

6301664543 | shivadhanu.0305@gmail.com | LinkedIn | GitHub | LeetCode | Codeforces

Summary

Artificial Intelligence undergraduate with hands-on experience in machine learning, full-stack development, and blockchain applications. Research Intern at Providence University (Taiwan) with expertise in developing AI-driven solutions, complemented by national-level hackathon achievements and strong problem-solving skills.

Education

Anurag University — Ghatkesar, Hyderabad
B.Tech in Artificial Intelligence CGPA: 9.26/10 — *Aug 2023 – May 2027*

Narayana Jr. College — L.B. Nagar, Hyderabad
Intermediate (MPC) Percentage: 94% — *Apr 2021 – May 2023*

Experience

Research Intern (TEEP Program) — May 2026 – Jul 2026
Providence University, Taichung, Taiwan

- Selected for the Taiwan Experience Education Program (TEEP) to conduct AI research on counterfeit predatory journal detection using DistilBERT, CatBoost, LightGBM, XGBoost, and SHAP explainability.
- Performed web scraping, feature engineering, model development, and contributed to an ongoing research manuscript under faculty supervision.

Projects

AI-Based DCRM Analysis for EHV Circuit Breakers (SIH 2026 Finalist) | *Machine Learning* — Link

- Developed an AI-assisted system for analyzing Dynamic Contact Resistance Measurement (DCRM) waveforms of 132kV/220kV/400kV SF_6 circuit breakers.
- Built machine learning models to detect contact wear, arcing, bounce, and mechanism faults from waveform patterns.

LifeLink – AI-Powered Hospital Management Platform | *React.js, Node.js, Express.js, MongoDB* — Link

- Developed a full-stack healthcare platform featuring emergency response, hospital discovery, and secure medical record management.
- Implemented SOS alerts with real-time GPS location sharing and nearest responder notification.
- Built role-based authentication and encrypted medical document storage for secure patient data management.

ClubDAO – Decentralized Governance & Treasury System | *Solidity, Hardhat, React.js, Ethers.js* — Link

- Developed Ethereum smart contracts supporting proposal creation, voting, and automated treasury execution.
- Implemented secure vote tracking with double-vote prevention and execution constraints.
- Built a React dashboard integrated with MetaMask for on-chain governance and treasury management.

Technical Skills

Languages: Java, Python, C/C++, SQL,C, JavaScript, Solidity
Frameworks: React,SpringBoot, Node.js, Flask, FastAPI, Hardhat
Developer Tools: Git, Docker, Google Cloud Platform

Coding Profiles

LeetCode: Rating 1600+ — Solved 400+ Problems — Strong in Data Structures and Algorithms

Achievements

1st Place, VISIONOVA Hackathon 2026 – Secured top position in college-wide innovation challenge.

Finalist, Smart India Hackathon (SIH) 2025 – Selected at national level under Government of India initiative.

1st Place, IEEE Coding Competition 2023 – Won coding contest organized by IEEE CIS Chapter.
